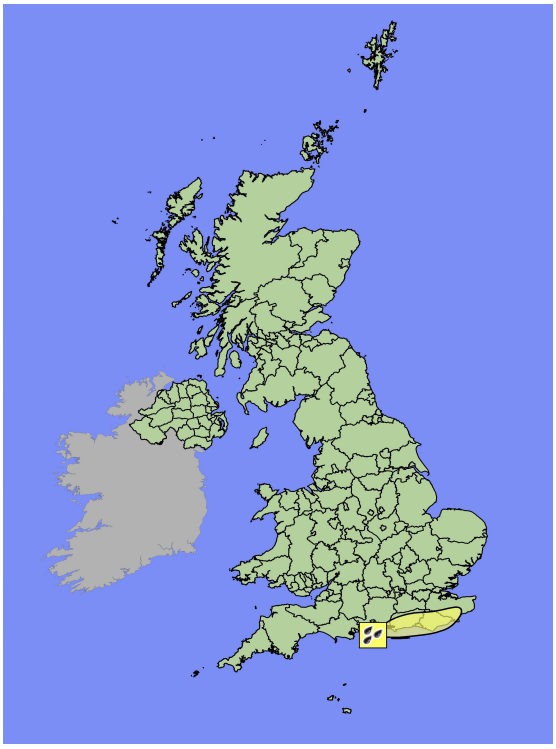
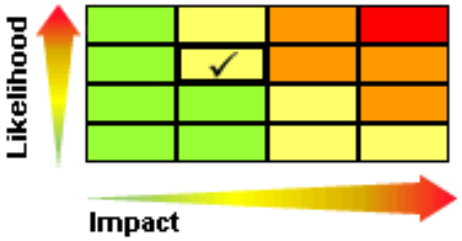
National Severe Weather Warning Service





Chief Forecasters Assessment
We are still keeping an eye on developments which may bring a further batch of rain through the second half of Friday. Amounts will probably be relatively modest, typically 15 mm or less but perhaps very locally more than 30 mm. However coming on top of recent rainfall, this may lead to some further problems. It will be worth checking for updates to this warning, as confidence is currently not high concerning the exact extent and amounts of rainfall.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:00 on Fri, 15th Jun 2012** until **23:59 on Fri, 15th Jun 2012**

Showers are likely to develop and then merge into more persistent rain later on Friday afternoon and evening, with the potential for some heavy rainfall in places.

The public should be aware that, following recent heavy rainfall, the ground remains saturated in places, and that further rainfall could lead to surface water issues and perhaps localised flooding.
